

Could I have hep C?

Have you ever had a tattoo or piercing somewhere other than a professional studio?

Have you ever been to prison?

Have you ever injected a drug?

Have you ever had a partner who is at risk of hep C?

**Even if it was only once
or a long time ago,
it's a good idea to get tested.**

People can get hep C more than once.

Testing is quick, easy, and some services can do it for free.

If your test is positive, there are easy, effective tablets you can take to help you get rid of hep C in 8 to 12 weeks.
